This report has been prepared by Midlothian Council as part of the Scottish Government funded ‘Smarter Choices Smarter Places’ initiative. The project ‘Out and About Midlothian’ aims to promote the benefits of sustainable travel, to enhance the health and wellbeing of the local community and to make sure Midlothian continues to be a great place in which to live, work, shop and relax.

Background and objectives

This report outlines the results of Midlothian Council’s Borders Railway Travel Pattern Survey 3 undertaken between February and March 2017. The research is part of the ‘Out and About Midlothian’ project, jointly funded with Smarter Choices Smarter Places. The project seeks to encourage and promote the benefits of active travel and bus use, including to and from the four new railway stations in Midlothian.

The survey aimed to explore Borders Railway users’ travel patterns at Eskbank, Newtongrange and Gorebridge railway stations. In addition to current railway usage, the results will provide a useful insight regarding access to the railway stations, as well as a comparison with the results released in February 2016. This will also allow the council to consider what actions could be taken to promote sustainable travel, with potential to improve journey information and enhance the quality of journeys to and from the stations.

Additionally, the survey also allowed participants to contribute with feedback by providing general comments or suggestions, as well as stating any issues they might encounter when travelling to and from the railway stations.

Summary of results

Current railway usage and travel patterns

Figures 1, 2 and 3 show current usage of the stations, the most responses showing very frequent usage (5 or more times a week) are at Eskbank 34%, followed by Newtongrange at 30.9% and Gorebridge at 13.7%.

The most commonly occurring answer regarding respondents’ main purpose of trips at Eskbank and Newtongrange stations was work/business at 51% and 45.3%, respectively. At Gorebridge, however, leisure was the most common response at 61.1%, followed by work/business at 28.7%. At Eskbank and Newtongrange stations, leisure accounted for 29.2% and 31.6%, respectively. (Figures 4, 5, 6).

Most respondents travelled up to one mile to the railway station from home, with 43.6% at Eskbank, 41.7% at Newtongrange and 56.3% at Gorebridge (Figures 7, 8, 9). Journey times of 15 minutes or less from home to the railway station prevailed at Eskbank (81.7%) and Gorebridge (72.1%), while at Newtongrange most people seemed to travel between 16 and 30 minutes to the station (53.1%) (Figures 10, 11, 12).

Regarding the mode of transport used to travel to the railway station, walking was the most prevalent at all three stations (over 45%), with cycling levels at 7.3% at Eskbank station, 9.4% at Newtongrange station and 6.5% at Gorebridge station. The highest amount of bus use to and from the station took place at Gorebridge with 7.4% of respondents using one bus and 0.9% using 2 or more buses to get to the station from home (Figures 13, 14, 15).
Suggestions for increasing active travel and bus use
The most frequent responses regarding ways of encouraging rail users to walk or cycle more regularly to and from the stations were ‘improved cycle paths and signage on my journey’ for Eskbank (23.8%, Figure 16), the same answer being the most popular one for Newtonrange (35.7%, Figure 17) and ‘meeting people who walk or cycle in the same direction’ for Gorebridge (28.6%, Figure 18).

According to respondents, they would be more encouraged to use the bus to travel to and from the stations if there were ‘more direct bus routes’ to Eskbank station (44.4%, Figure 19), ‘better connections from home’ to Newtonrange station (77.8%, Figure 20) and ‘more direct bus routes’ to Gorebridge station (50%, Figure 21).

As shown in Figures 22, 23, and 24, if the suggested measures were in place, the majority of those questioned at Eskbank (47.8%), Newtonrange (54.2%) and Gorebridge (54.3%) would travel actively or by bus ‘sometimes’, while an average 12% of respondents from would do it all the time. To be noted that the sample of respondents for the three questions above (Figures 16 – 24) was smaller than the total sample for the survey, as many regarded the question as ‘not applicable’ due to them already using sustainable travel modes or having no answer.

Considering safety at the railway stations (Figures 25, 26, 27), the majority of respondents felt very safe, with the most respondents feeling very safe at Gorebridge station (81.4%), followed by Newtonrange station (71.1%) and Eskbank station (69.5%).

Follow-up - comparison with previous Borders Railway usage results
According to the survey results, there has been an overall increase in very frequent users (5 or more times a week) of the stations compared to last year, for all the stations, with the most pronounced difference being at Eskbank, where 34% of respondents now use the station very frequently compared to only 2.5% doing so the previous year (Figures 28, 29, 30).

Follow-up comparison and percentage change with previous Borders Railway travel modes
Results showing a comparison with survey results from the 2016 winter survey can be found in Figures 31, 32, 33.

Figures 34, 35, 36 examine the percentage change of these results, showing a clear picture of any increase or decrease in every travel mode. For Eskbank and Newtonrange, increases of 6 – 11% in walking and 2.9 - 4.4% in cycling have been observed based on respondent’s answers. For Gorebridge station, however, walking decreased by 13.6% and car use (lone driver) increased by 6.7%. On the other hand, cycling increased by 5.8% at Gorebridge. Car sharing, car use (lone driver) and bus use have decreased for both Eskbank and Newtonrange stations, while bus use increased by 1.7% at Gorebridge.
**Survey method**

**Data collection**
One data source was taken into account for the survey by the use of questionnaires.
- Platform questionnaire at Eskbank, Newtonrange and Gorebridge railway stations. (293 responses)

Platform questionnaires have been completed in collaboration with Gorebridge Community Development Trust as part of their Climate Challenge Fund project called ‘Greening Gorebridge’. The help of the Trust and the volunteers who worked hard to collect responses is greatly appreciated.

The platform questionnaires were conducted among passengers alighting or boarding trains between February and March 2017. The time slots when passengers were interviewed range from 8:00 am to 6:30 pm. The times of day for undertaking the questionnaires were distributed in an even manner between the three railway stations.

**Sample population**

Based on Scottish Government transport figures released on 31 May 2016, the number of journeys between 6 September 2015 and 31 March 2016 were 694,373. The population size of the survey (Borders Railway users) is estimated based on these figures using a weekly average. Based on the 30 weeks these results are representative for, an average of 23,145 passenger journeys per week would be accountable for this period. Assuming these figures include return journeys, we could estimate 11,572 individual users per week which makes the survey’s target population.

Accordingly, based on this estimate and a sample size of 293 respondents from the survey, there is a 6% margin of error assuming a 95% level of confidence. This indicates that there is 95% likelihood that the sample accurately reflects the attitudes of at least 89% of the target survey population.

</table>

16
- Service fine, although there is litter on the ground beside trains
- More carriages needed
- Stopped using trains but started again and the service feels better
- Not good at festivals, needs more carriages.
- Not enough carriages and not too clean
- More carriages, trains late
- Add newer trains, faults are annoying and too few carriages
- Unreliable sometimes
- I drive because there are no buses
- Service is good. Trains sometimes a bit grubby
- Good service, although cancellations are annoying
- More carriages at peak times and school holidays. Service has improved over the last 6 months.

- Toilets needed. What is happening with station building?
